

BROCCOLI

Long Stem Candelabrum

Long Stem Broccoli Candelabrum is a trailblazer in its field as the first commercial purple long stem broccoli available in South Africa. Candelabrum fits into the same class as Menorah but only with purple curds against Menoras green curds. Candelabrum is widely adaptable and making its mark in the culinary world. Ready to harvest 55-60 days from planting and picking for 4-6 weeks makes it a valuable asset. We recommend planting Candelabrum at a density of between 40-45m per Ha.
